

Definition of Done (DoD)

A User Story is considered Done and ready for final delivery only when it satisfies the following criteria:

1. Development & Coding Standards

- Implementation: All tasks associated with the User Story have been implemented and completed.
- Coding Practices: The source code follows the team's established coding conventions and clean code practices.
- Integration: The code has been successfully merged into the main branch with no merge conflicts.

2. Code Quality & Static Analysis (SonarQube)

- Analysis: A SonarQube scan has been performed on the main branch after the merge.
- Issue Tracking: The Quality Report shows Zero Critical or Blocker issues.
- Duplication: Code duplication is confirmed to be below 10%.
- Maintainability: The project maintains a Maintainability Rating of A or B.

3. Continuous Integration & Testing

- CI Pipeline: The GitHub Actions CI pipeline has finished successfully (Passed) for the latest push.
- Automated Testing: All unit tests (e.g., validating email and password logic) have been executed automatically and passed within the CI pipeline.
- Build Status: The build step (dependency installation and compilation) is completed without errors.

4. Documentation & Diagrams

- Backlog Update: The Product Backlog has been updated to reflect any changes during development.

- Visual Documentation: The Use Case Diagram has been updated using professional tools (e.g., Draw.io).

5. Acceptance & Validation

- Criteria Fulfillment: The feature meets all the defined Acceptance Criteria for the specific User Story
- Verification: The functionality has been verified through manual testing in the development environment.
